

Mr Wilson Richerson

Wilson Rickerson is CEO of Meister Consultants Group (MCG) and leads the firm's international energy and climate practice. He specializes in renewable energy and climate change policy design and has worked with a broad range of governments, international organizations, and corporations. Recent project partners include the United Nations Environment Programme, the International Energy Agency, the Inter-American Development Bank, the US National Renewable Energy Laboratory, and Deutsche Bank. During the past several years, he has worked with organizations in North America to expand policy maker focus on heating and cooling. In 2007, he worked with the Heinrich Böll Foundation to convene a national discussion on renewable thermal energy. More recently, he has worked

extensively on renewable heating and cooling in the Northeast, including support for the development of renewable thermal incentive programs in Massachusetts. He serves on the Editorial Board of BioCycle Magazine and the Board of IFOK GmbH. He holds a Masters in Energy and Environmental Policy from the University of Delaware, and a BA in International Relations from the College of William & Mary.

His talk is on: **Renewable heating and cooling policy: Best practices in the US and beyond**
